EVC-2 / Environmental Controller (Digital)

We have combined digital temperature and humidity controls together in one flexible unit called the EVC-2. It is EXTREMELY accurate and can control temperature and humidity levels independently OR combine the functions to activate together.

Unlike other competing controllers, the EVC-2 has been designed to be easy to understand. Each function has a clearly identified "pushbutton" and a large LCD display. No complicated menus to negotiate. It also records minimum and maximum temperature and humidity levels.

The EVC-2 also has a16 ft remote probe assembly so the temperature and humidity can be measured exactly where you would want to... at plant level.

Connection Example

For indoor growing, Cooling devices such as ventilation fans or air-conditioners connect to the Temperature Device receptacle

Dehumidifier or a humidifier can be connected to the Humidity Device receptacle
