

Just like it's little brother the HPH-4, the HPH-8 makes it simple to control your larger garden setups with multiple HID lights. In fact the HPH-8 can safely control up to 8000 watts of lighting from a single timer or controller. The HPH-8 has eight UNIVERSAL receptacles that accept either a 120 volt (Nema 5-15P) or 240 volt (Nema 6-15P) male plug from your HID ballasts. You provide a main power connection up to 50-amperes to the HPH-8 and it does the rest!

Up to (8) 1000-watt HID light fixtures

Connection Example

HPH-8

HPH-8 is housed in a heat-sink aluminum enclosure that is designed to remove the heat and allow cooler operation.

We use 2 heavy duty 40-amp industrial contactors for the HPH-8
